

WORK EXPERIENCE

Chief Executive Officer , <i>Stamp (YC W25)</i>	<i>Jan 2025 - Present</i>
- CEO and Founder of Stamp, the AI Secretary for email and calendar - Architected and Implemented a service oriented backend integrating directly with IMAP and SMTP email protocols, supporting all modern email client features (schedule send, snoozed emails, labels, etc) - Built a custom Agent SDK optimized for IMAP with usage based billing and prompt rendering support to construct a multi-agent ecosystem, with distinct agents for email annotation (summarization, todos, draft replies), user memories, Deep Research, Voice Mode, and more - Fine-tuned a multilingual embedding model via contrastive learning to implement both a Retrieval Augmented Generation pipeline (hybrid semantic search + reranking) and a semi-supervised clustering algorithm for labeling emails - Built Web, iOS, Android, and Desktop apps for the product, with on-device persistence and background refresh capabilities for optimal performance - Raised \$500k funding and accepted into the Y Combinator Winter 2025 batch; managed all business operations in addition to engineering, including product ideation, marketing, hiring, etc.	
Software Engineer , <i>Stripe</i>	<i>Jul 2024 - Dec 2024</i>
- Saved \$1 million annually in database costs by optimizing PaymentIntents API code, and performing shard-aware database migrations for 150 billion stale records via PySpark, Databricks, Apache Airflow, and Apache Iceberg - Improved API performance and stability for the PaymentIntents Multicapture API by using the Factory Design Pattern to decouple code across customer environments, increasing test coverage by 20% - Improved Adaptive Pricing API semantics by adding presentment currency fields to the PaymentIntent Dataview and refactoring legacy PaymentIntent APIs to support multi-currency presentment	
Software Engineer Intern , <i>Apple</i>	<i>May 2023 - Aug 2023</i>
- Architected 10,000+ line C++ library from scratch to detect topological and geometric changes in HD Maps for Autonomous Vehicles, reducing manual map annotation time by 70% - Constructed custom UI geometry classes, modals, and event handlers in Objective C to visualize library analysis in custom MacOS application - Implemented Protobuf schemas for library analysis serialization, visualization, and deployment	

RESEARCH

Computer Vision Researcher , <i>Cornell University</i>	<i>Aug 2023 - May 2024</i>
- Worked with Prof. Noah Snavely on two projects centered around Multi-View Reconstruction - Implemented CoTracker optical flow pipeline for video data preprocessing to explore applications in generative AI video editing - Experimented augmenting the dust3r model architecture to process image EXIF metadata along-side input images and examine whether this yielded superior reconstruction results	

PROJECTS

Archivist Code Search: Created a VS Code Extension to provide blazingly fast Semantic Search for code. Supports realtime indexing and precise chunking to pinpoint relevant code. Utilized SentenceTransformers to fine-tune the embedding model and Tree Sitter for chunking. <i>Tech: FastAPI, Hugging Face SentenceTransformers, MongoDB Atlas Vector Search, AWS EC2, Docker</i>	
Strompt (structured prompts): A lightweight extensible Prompt Rendering Library, published on NPM. Enables consistent, maintainable, typo-free prompt generation for agents. <i>Tech: TypeScript, GitHub Actions, NPM</i>	

EDUCATION

Cornell University	Ithaca, NY
B.S. Computer Science; GPA: 4.16/4.0	2021 - 2024
Minor: Applied Mathematics	
Awards: Merrill Presidential Scholar (Awarded for achievement & leadership to top 8 CS Undergraduates)	
Courses: Honors Object Oriented Data Structures, Large Scale Machine Learning, Analysis of Algorithms, Computer Vision	
Activities: Cornell AppDev (President), Cornell Hack4Impact (Engineering Lead), Association of CS Undergrads (Corporate Officer)	

SKILLS

Languages	Java, TypeScript, Python, C++, HTML/CSS/JS, C, OCaml
Machine Learning	Pytorch, SkLearn, SentenceTransformers, NLTK, Pandas, Numpy, Jupyter
Frameworks	Express & Node.js, Django, Flask, React, React Native
DevOps & DB	MongoDB, GraphQL, SQL, Docker, Azure, AWS, GCP, Protobuf, Jenkins, Terraform
